

Fig. S1. Frequency distribution of selected otolith-derived traits of *P. amboinensis* from hatching to 8 weeks post-settlement.

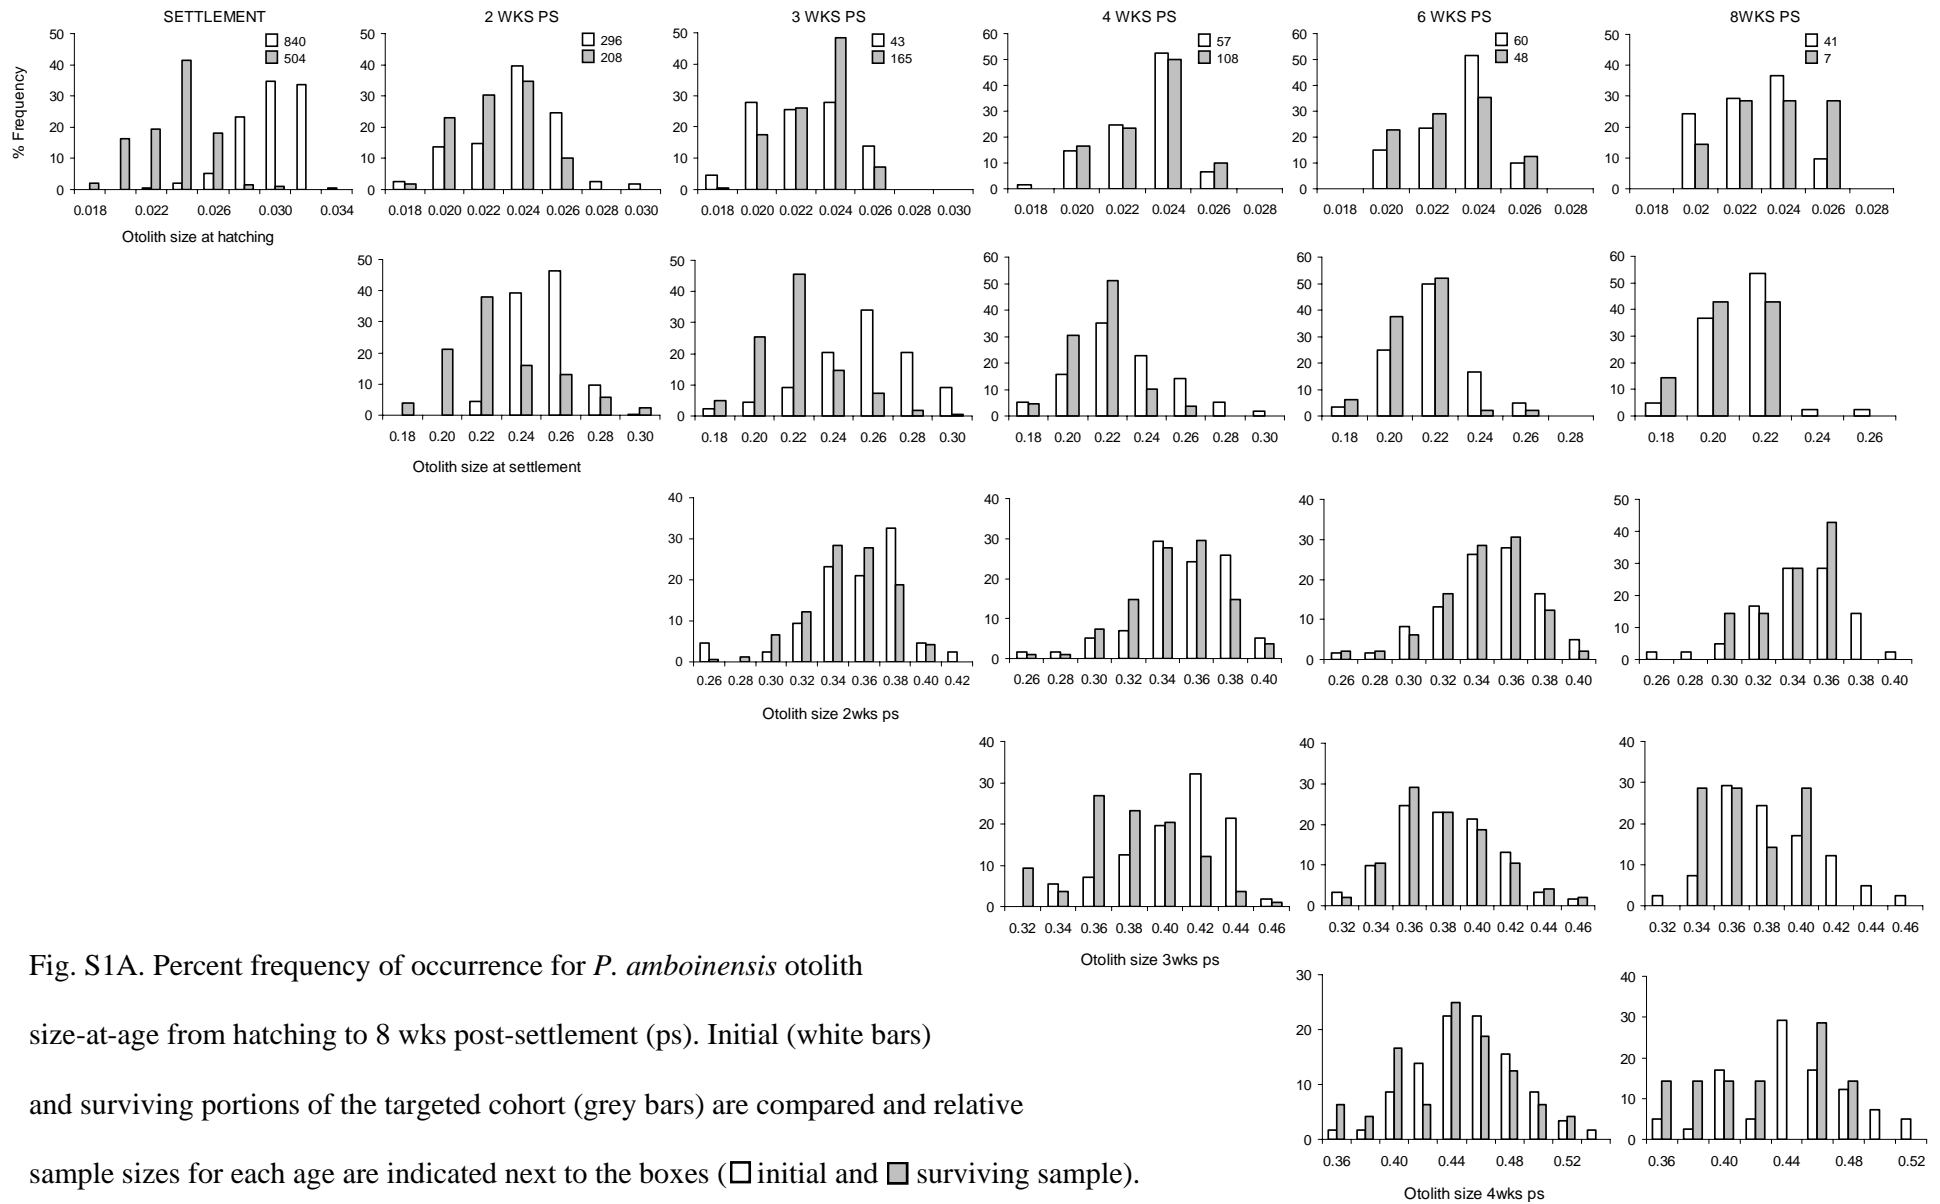

Fig. S1A. Percent frequency of occurrence for *P. amboinensis* otolith size-at-age from hatching to 8 wks post-settlement (ps). Initial (white bars) and surviving portions of the targeted cohort (grey bars) are compared and relative sample sizes for each age are indicated next to the boxes (□ initial and ■ surviving sample).

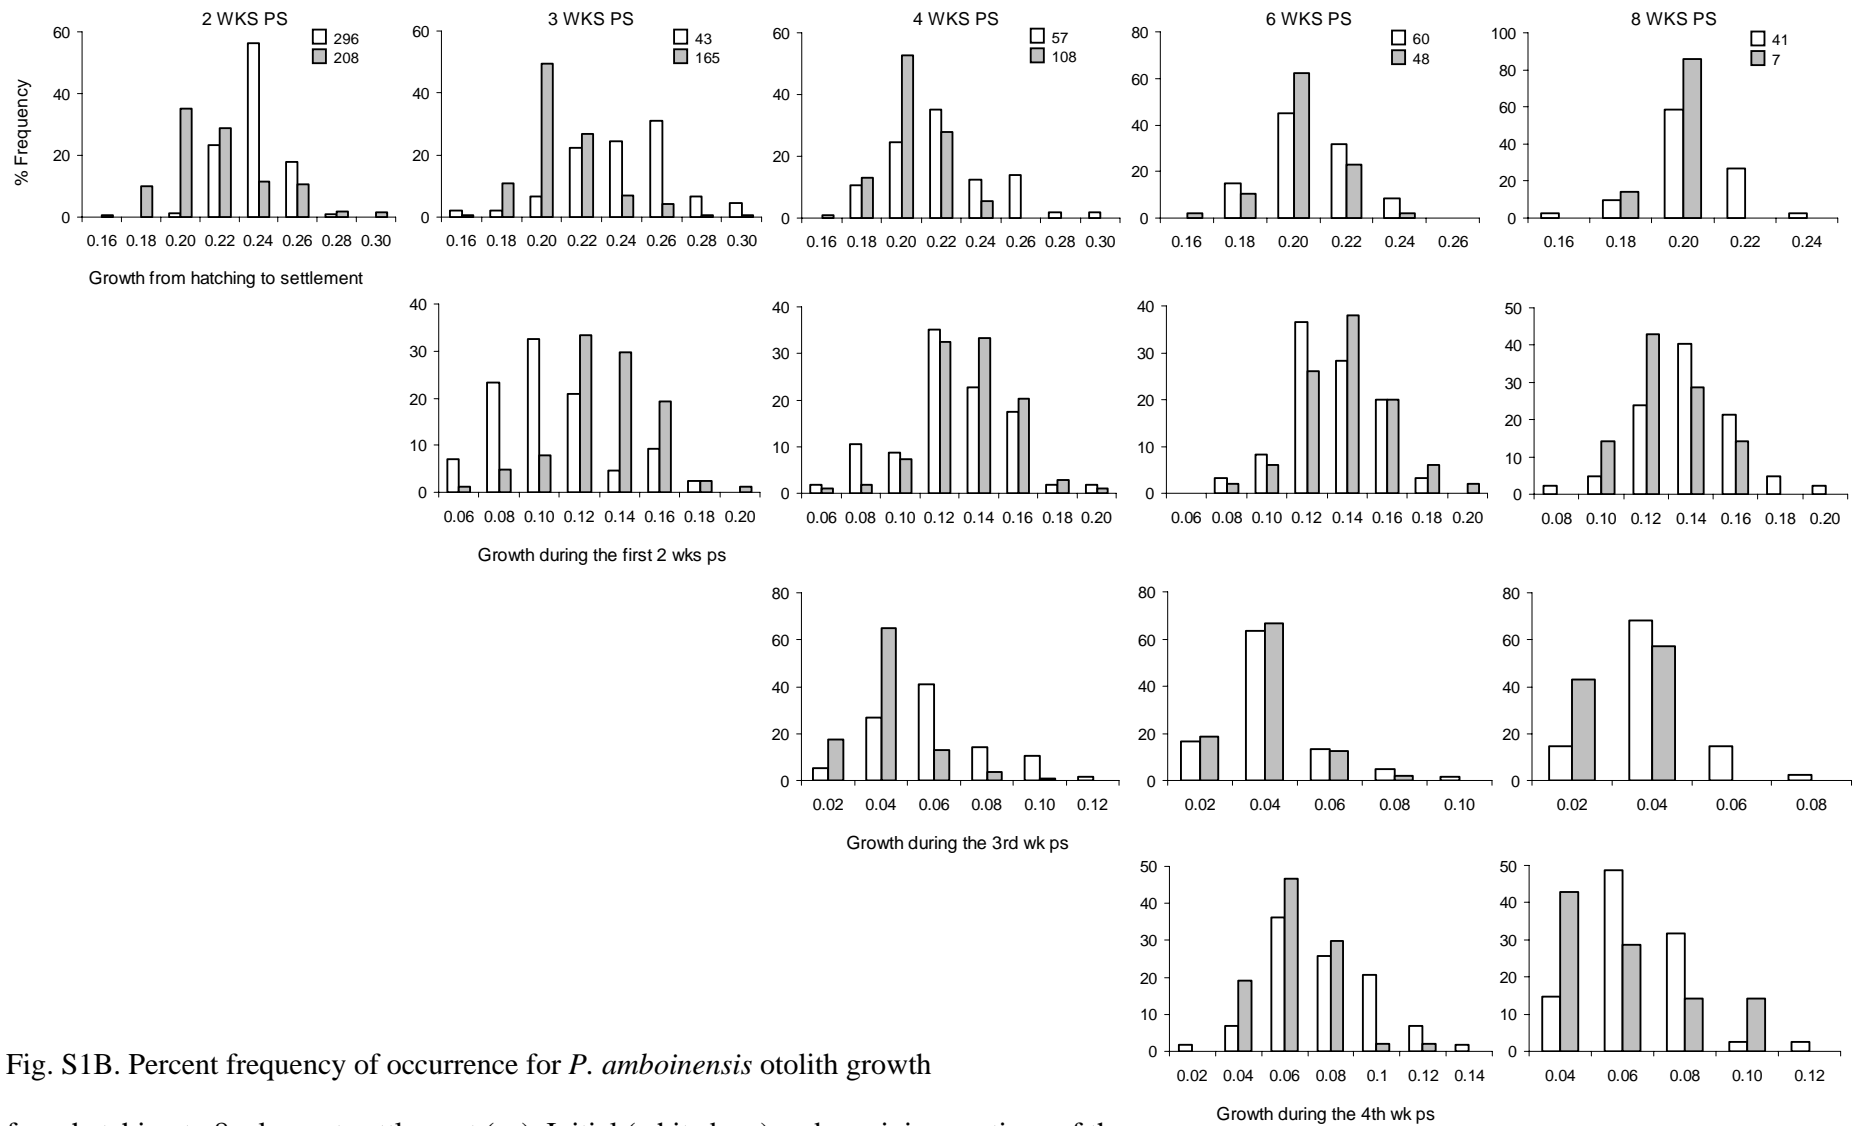

Fig. S1B. Percent frequency of occurrence for *P. amboinensis* otolith growth

from hatching to 8 wks post-settlement (ps). Initial (white bars) and surviving portions of the

targeted cohort (grey bars) are compared and relative sample sizes for each age are indicated next to the boxes (□initial and ■surviving sample).
